Alumni Mentor**

## ACKNOWLEDGEMENT

We would like to take this opportunity to express our sincere gratitude to **Mr. Nitin Kudal(CEO)** and **Mr. Yogesh Kolhe(Course Coordinator)** for their invaluable guidance and support throughout this project. Their insights, encouragement, and constructive feedback at every stage have played a crucial role in shaping our work.

A special thanks to the entire faculty and staff of **Sunbeam Institute of Information Technology, Pune**, whose support and encouragement created a great learning environment for us.

This project would not have been possible without the help, patience, and motivation of everyone involved. We truly appreciate all the time and effort that went into making this a success.

Aman Gupta

## **ABSTRACT**

The Household Services Platform is a web-based application that connects users with service providers for various household needs, such as plumbing, electrical work, cleaning, and more. Built with React for a smooth and responsive frontend, Java for a robust backend, and MySQL for secure data storage, the platform ensures a seamless experience. Users can easily book services, manage profiles, make secure payments, and leave reviews. Service providers can manage bookings, while admins oversee the system through a dedicated dashboard. This platform simplifies the process of finding and hiring trusted household service professionals.

## **1.Introduction**

In today's fast-paced world, managing household tasks can be challenging. The Household Services Platform addresses this by offering a user-friendly web application that connects individuals with professional service providers for various home needs, such as plumbing, electrical work, and cleaning. Built with a responsive React frontend, a robust Java backend, and secure MySQL data storage, the platform ensures a seamless experience for users. Users can easily book services, manage profiles, make secure payments, and leave reviews, while service providers can efficiently handle bookings. Administrators maintain oversight through a dedicated dashboard. This integrated approach simplifies the process of finding and hiring trusted household service professionals, enhancing convenience and reliability for all parties involved.

## **2.Product Overview and Summary**

### **2.1.Purpose**

The Household Services Platform is designed to make it easy for users to connect with trusted professionals for various home tasks, such as plumbing, electrical repairs, and cleaning. By using React for the user interface, Spring Boot for the backend, and MySQL for data storage, the platform ensures a smooth and efficient experience.

Key Features:

- **User-Friendly Booking:** Users can quickly find and schedule services that fit their needs.
- **Profile Management:** Both users and service providers can manage their profiles and track service history.
- **Secure Payments:** The platform offers safe and straightforward payment options.
- **Feedback System:** After a service is completed, users can leave reviews, helping maintain quality and trust.

By integrating these technologies, the platform aims to provide a reliable and convenient solution for managing household services.

## **2.2.Scope**

The project encompasses the development of the following components:

1. **User Interface (UI):** Designing an intuitive and responsive UI with React to facilitate easy navigation and service booking.
2. **Backend Development:** Implementing a robust backend using Spring Boot to handle user authentication, service listings, booking management, and communication between users and service providers.
3. **Database Management:** Utilizing MySQL for secure storage and retrieval of data, including user profiles, service provider details, service categories, bookings, and transaction records.
4. **Security Measures:** Implementing security protocols to protect user data, ensure secure payment processing, and maintain overall platform integrity.

By focusing on these areas, the Household Services Platform aims to provide a reliable and convenient solution for managing household services, enhancing the overall user experience.

### **2.3. User Class and Characteristics**

User Class	Characteristics
Admin	Admin can see all the information of the customers and service providers. He can even delete a service providers profile if he finds it faulty.
Customer	Customer can register if he is a new user and can update his profile. They can schedule a service from the service provider and choose payment option after the service is done by the service provider. They can then give feedback only after payment is done.
Service Providers	Service provider is the main vendor that provides various service. He also has a dashboard that provides him with information about total customers requesting different services, his work rating, total amount to collect

## **2.4. Design and Implementation Constraints**

### **Design Constraints:**

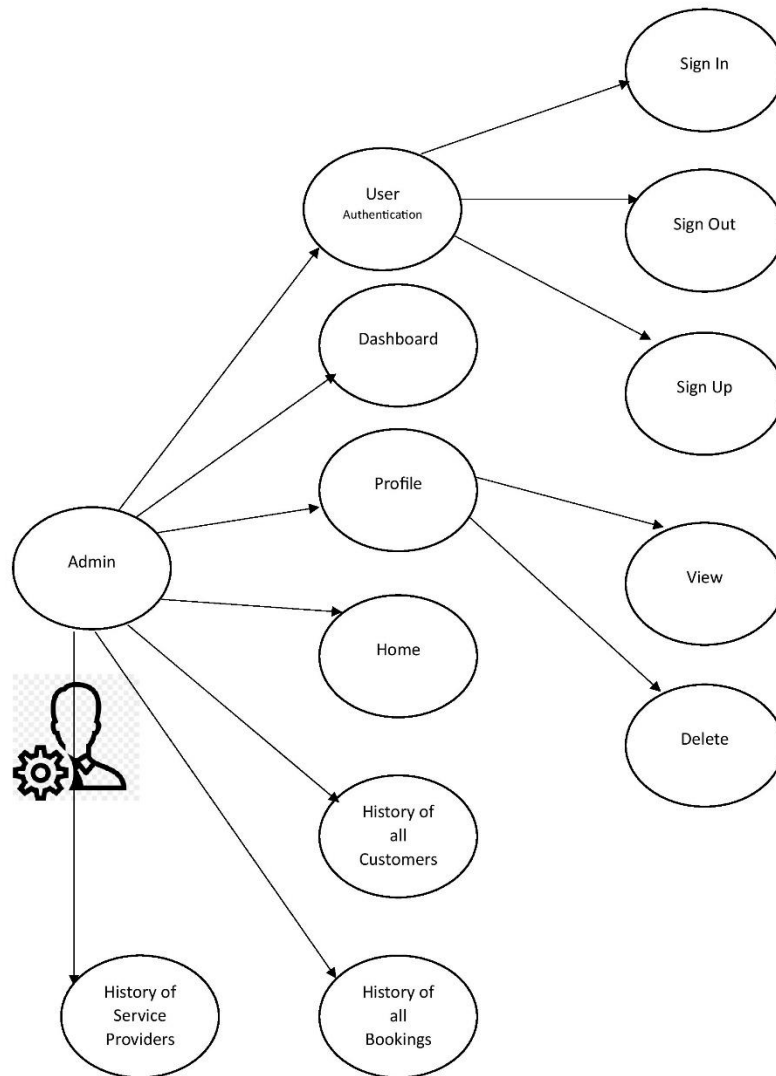

- **Technology Compatibility:** Ensure that React (frontend), Spring Boot (backend), and MySQL (database) integrate seamlessly to facilitate smooth data flow and communication.
- **User Experience (UX):** Design an intuitive and responsive interface with React to provide users with a seamless experience across various devices and screen sizes.
- **Security:** Implement robust security measures, including user authentication and authorization, to protect sensitive data and maintain user trust.

### **Implementation Constraints:**

- **Database Design:** Structure the MySQL database efficiently to handle relationships between users, service providers, and services, ensuring data integrity and optimal performance.
- **API Development:** Develop RESTful APIs using Spring Boot to enable effective communication between the frontend and backend, ensuring they are well-documented and adhere to industry standards.
- **Performance Optimization:** Optimize both frontend and backend code to reduce latency and improve load times, enhancing the overall user experience.

## 3.Requirements

### 3.1 Functional Requirements

**Admin Flow**

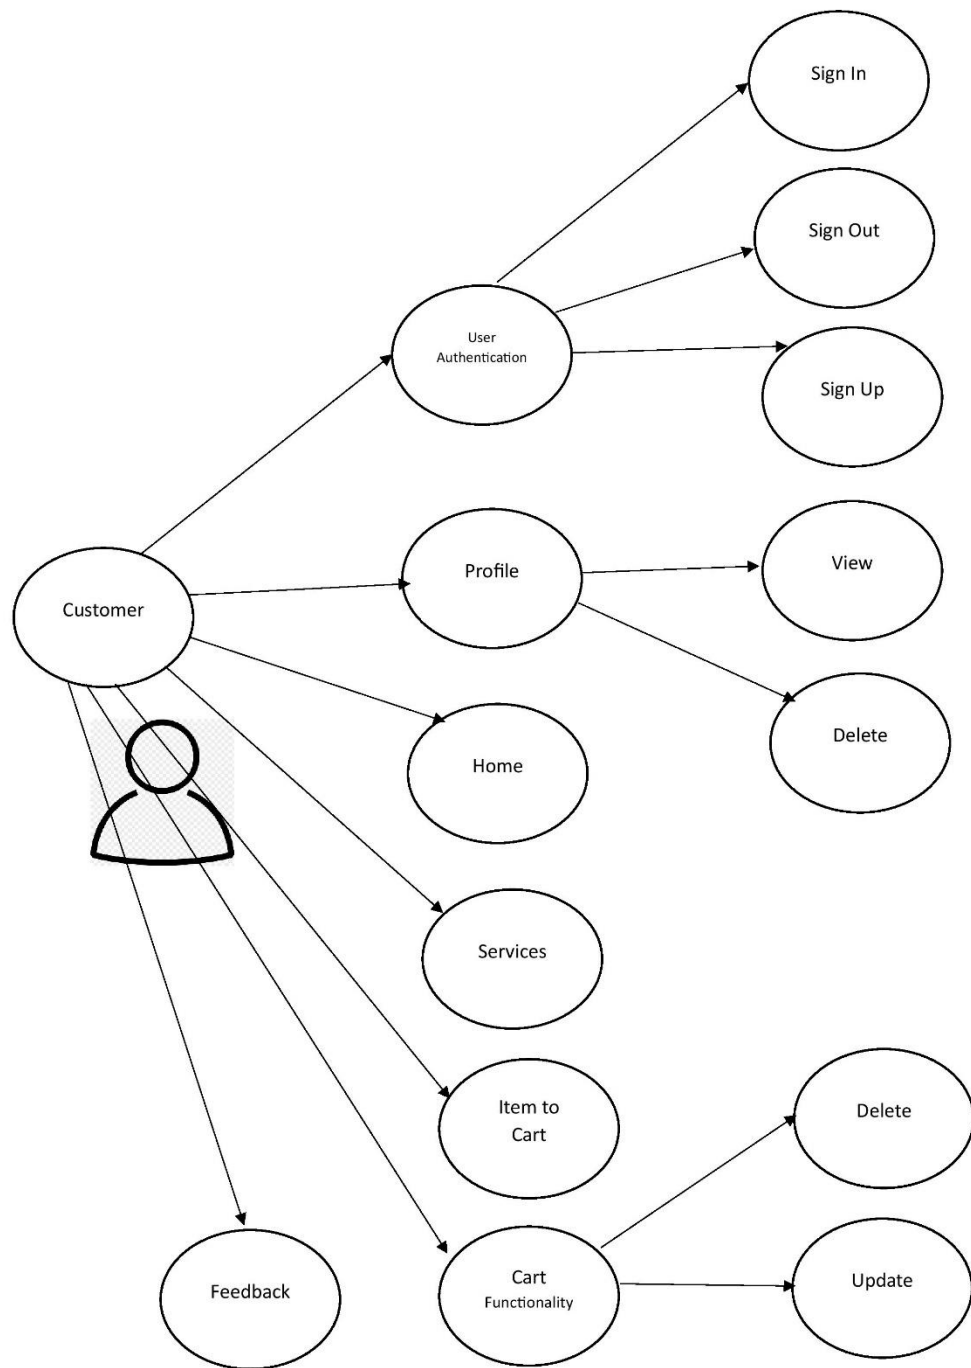

### **3.1.1 User Case for Administrator**

#### **3.1.1.1 Home Page**

- **Objective:** Admin access to system functionalities
- **Features:** Sign in to access the functionalities.

#### **3.1.1.2 Admin Home Page**

- **Objective:** Oversee the management of customers and service providers
- **Features:**
  - View all Types of Customers
  - View all Types of Service Providers.
  - View all Types of Services requested by the customer.
  - Delete a Service Provider.

**Customer Flow**

### **3.1.2 User Case for Customer**

#### **3.1.2.1 Customer Login Page**

- **Objective:** To authorize right customer with his login credentials
- **Features:** Sign in to access the functionalities.

#### **3.1.2.2 Customer Home Page**

- **Objective:** Access to all the services provided.
- **Features:** Customer can select a service which would redirect him to the cart page.

#### **3.1.2.3 Add to Cart Page**

- **Objective:** Access to all the services selected by the customer.
- **Features:** Customer can view all the services selected and can schedule the time by clicking on the service box.

#### **3.1.2.4 Schedule Time Drop down Menu**

- **Objective:** Access to all time slots that a customer can select.
- **Features:** Show all the time a service provider schedules his service.

### **3.1.2.5 Cart Booking**

- **Objective:** Redirects to all the service selected by customer.
- **Features:**
  - Delete a service  
Customer can delete a selected service.
  - Confirm all orders  
Customer can confirm their orders.

### **3.1.2.6 Confirm Booking Page**

- **Objective:** Shows all the services selected by the customer.
- **Features:** Redirects him/here to the payment page after the service is done.

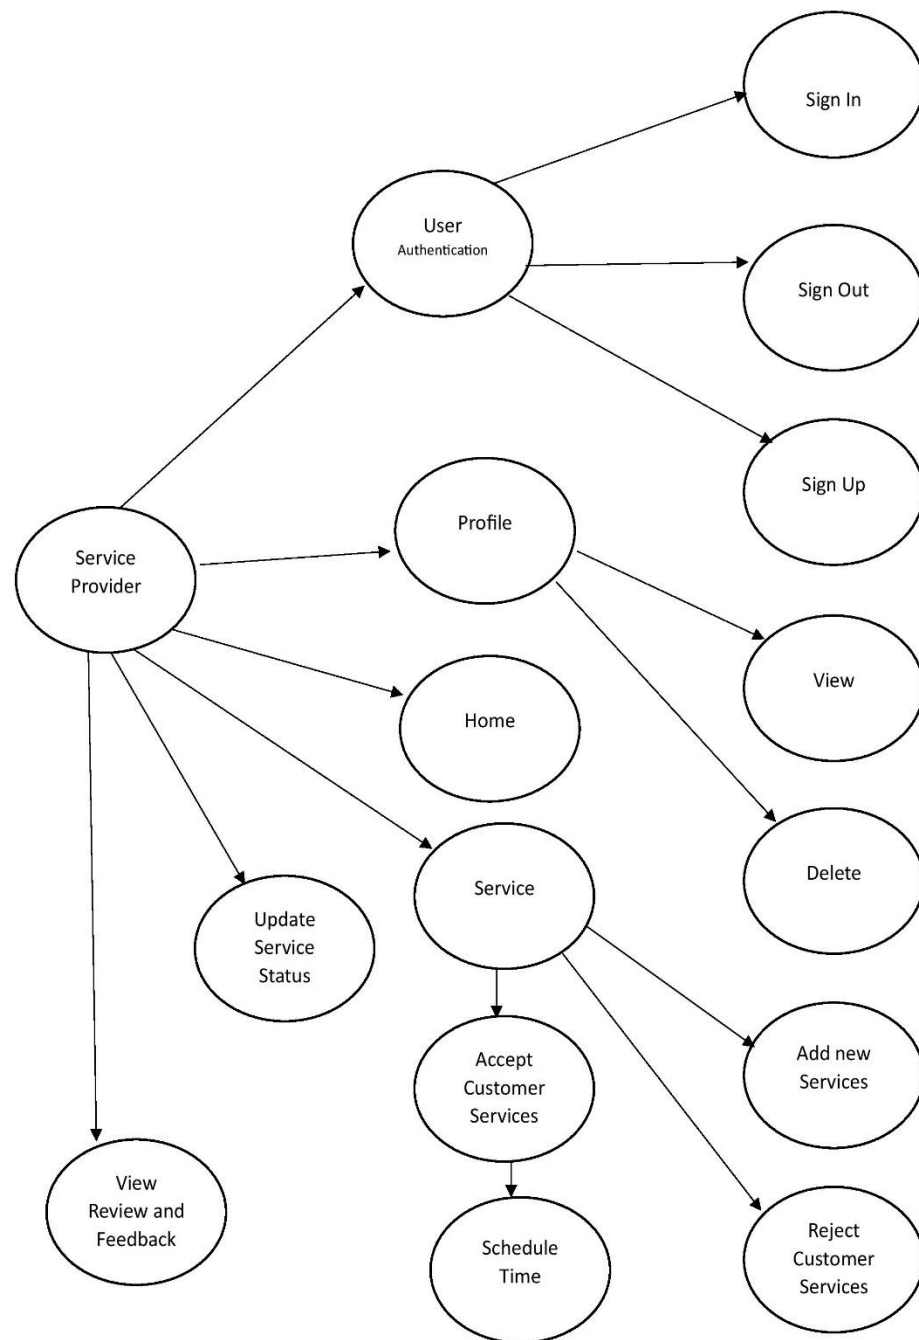

### **3.1.2.7 Payment Page**

- **Objective:** Shows all Payment options.
- **Features:** Customer can make payment in any of the above options.

### **3.1.2.6 Feedback Page**

- **Objective:** Shows Feedback Page
- **Features:** He can leave their feedback for Service Provider. Redirects to Customer Home Page.

**Service Provider Flow**

### **3.1.3 User Case for Service Provider**

#### **3.1.3.1 Service Provider Login**

- **Objective:** To authorize right service provider with his/her login credentials.
- **Features:** Sign in to access the home page.

#### **3.1.3.2 Service Provider Home page**

- **Objective:** To show all the service requested by the customer.
- **Features:** Select a request to be redirected to the dashboard.

#### **3.1.3.3 Dashboard**

- **Objective:** Show total number of job done, money earned, rating , reviews.
- **Features:** Just hove rover the images to see the same.

#### **3.1.3.4 Service Provider Profile Page**

- **Objective:** Help Service provider to update his information like area of service, phone number.
- **Features:** Update Service Provider information.

## **3.2 Non-Functional Requirements**

### **3.2.1 Interface**

User interfaces must be intuitive and user-friendly.

### **3.2.2 Constraints and Performance**

- **Number of Concurrent Users:** The system should handle at least 1000 transactions/inquiries per second.
- **System Resilience:** The application should be resilient to temporary server failure.

### **3.2.3 Hardware and Software Requirements**

**Hardware-** Intel Core i5 or higher (or AMD equivalent), 8 GB RAM, 512 GB SSD or larger.

**Software-**

**Operating Systems:** MS Windows 13, Ubuntu 22.04.

**Database:** MySQL.

**Server:** Embedded Tomcat.

**Browsers:** Compatible with modern web browsers.

### **3.2.4 System Design**

**Front-End:** Developed using React.js.

**Back-End:** Built with Spring Boot for server-side logic.

**Database:** MySQL for storing user data, orders, and other system information.

**Server:** Embedded Tomcat for hosting the application.

## **4.Project Design**

### **4.1 Data Model**

#### **4.1.1 Database Design**

Table 1: User

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
<b>id</b>	bigint	No	Prim / auto-increment	NULL
<b>created_on</b>	date	Yes		NULL
<b>updated_on</b>	dateTime(6)	Yes		NULL
<b>address</b>	varchar(255)	Yes		NULL
<b>email</b>	varchar(255)	Yes		NULL
<b>name</b>	varchar(255)	Yes		NULL
<b>password</b>	varchar(255)	Yes		NULL
<b>phone_no</b>	varchar(255)	Yes		NULL
<b>role</b>	Enum	Yes		NULL

Table 2: Booking

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
<b>id</b>	bigint	No	Prim / auto-increment	NULL
<b>created_on</b>	date	Yes		NULL
<b>updated_on</b>	datetime(6)	Yes		NULL
<b>booking_slot</b>	int	No		NULL
<b>date</b>	date	Yes		NULL
<b>status</b>	varchar(6)	Yes		NULL

<b>customer_id</b>	bigint	Yes	MUL	NULL
<b>payment_id</b>	bigint	Yes	MUL	NULL
<b>serviceprovider_id</b>	bigint	Yes	MUL	NULL
<b>Services_id</b>	bigint	Yes	UNI	NULL

Table 3: Feedback

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
id	bigint	No	Prim / auto-increment	NULL
created_on	date	Yes		NULL
updated_on	datetime(6)	Yes		NULL
content	Varchar(225)	Yes		NULL
rating	int	No		NULL
booking_id	bigint	Yes	UNI	NULL
customer_id	bigint	Yes	MUL	NULL
serviceprovider_id	bigint	Yes	MUL	NULL

Table 4: Payments

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
<b>id</b>	bigint	No	Prim / auto-increment	NULL
<b>created_on</b>	date	Yes		NULL
<b>updated_on</b>	datetime(6)	Yes		NULL
<b>day</b>	datetime(6)	Yes		NULL
<b>payment_mode</b>	tinyint	Yes		NULL

<b>Status</b>	varchar(255)	Yes		NULL
<b>total_amt</b>	double	No		NULL
<b>customer_id</b>	bigint	Yes	MUL	NULL
<b>serviceprovider_id</b>	bigint	Yes	MUL	NULL

Table 5: Service\_provider

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
<b>id</b>	bigint	No	Prim / auto-increment	NULL
<b>created_on</b>	date	Yes		NULL
<b>updated_on</b>	datetime(6)	Yes		NULL
<b>earning</b>	double	No		NULL
<b>exp</b>	int	No		NULL
<b>customer_id</b>	bigint	Yes	MUL	NULL
<b>sp_id</b>	bigint	No	UNI	NULL

Table 6: Services

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
<b>id</b>	bigint	No	Prim / auto-increment	NULL
<b>created_on</b>	date	Yes		NULL
<b>updated_on</b>	datetime(6)	Yes		NULL
<b>name</b>	varchar(255)	Yes		NULL
<b>price</b>	double	No		NULL
<b>status</b>	varchar(255)	Yes		NULL

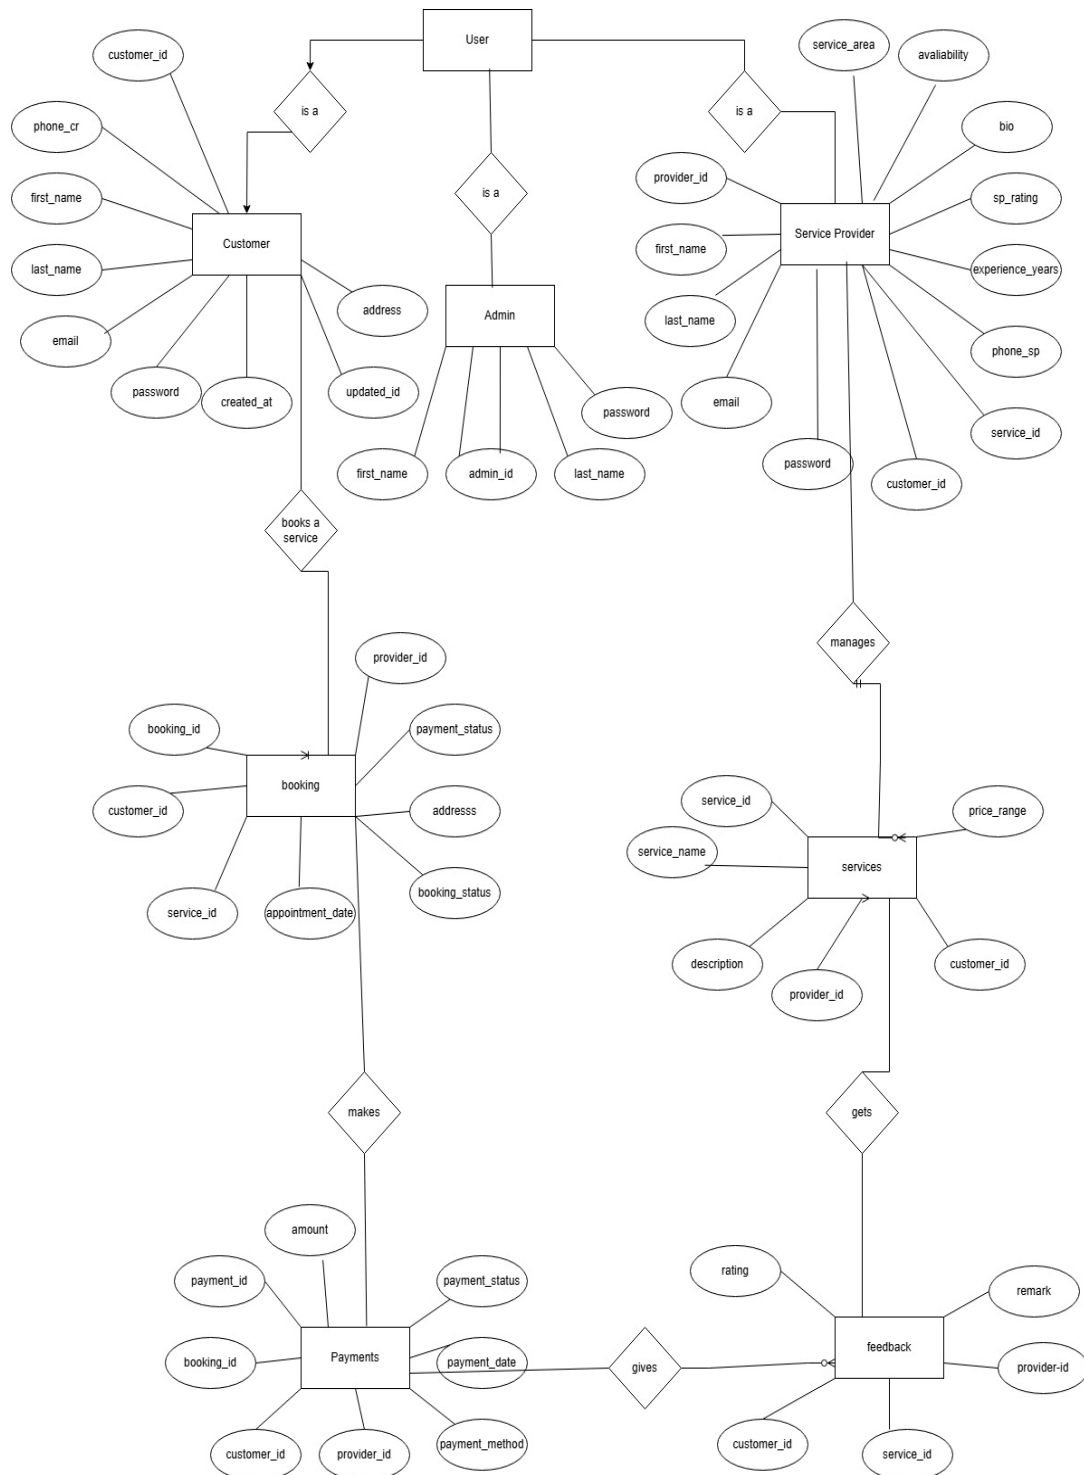

<b>service_provider_id</b>	bigint	yes	MUL	NULL
----------------------------	--------	-----	-----	------

Table 7: Address

<b>Field</b>	<b>Type</b>	<b>Null</b>	<b>Key and auto-increment</b>	<b>Default</b>
<b>id</b>	bigint	No	Prim / auto-increment	NULL
<b>created_on</b>	date	Yes		NULL
<b>updated_on</b>	datetime(6)	Yes		NULL
<b>adr_line1</b>	varchar(100)	Yes		NULL
<b>adr_line2</b>	varchar(100)	Yes		NULL
<b>city</b>	varchar(100)	Yes		NULL
<b>country</b>	varchar(100)	Yes		NULL
<b>state</b>	varchar(100)	Yes		NULL
<b>zip_code</b>	varchar(100)	Yes		NULL

## 4.2 Process Model

### 4.2.1 ER Diagram

## **CODING STANDARDS IMPLEMENTED**

### **Naming and Capitalization:**

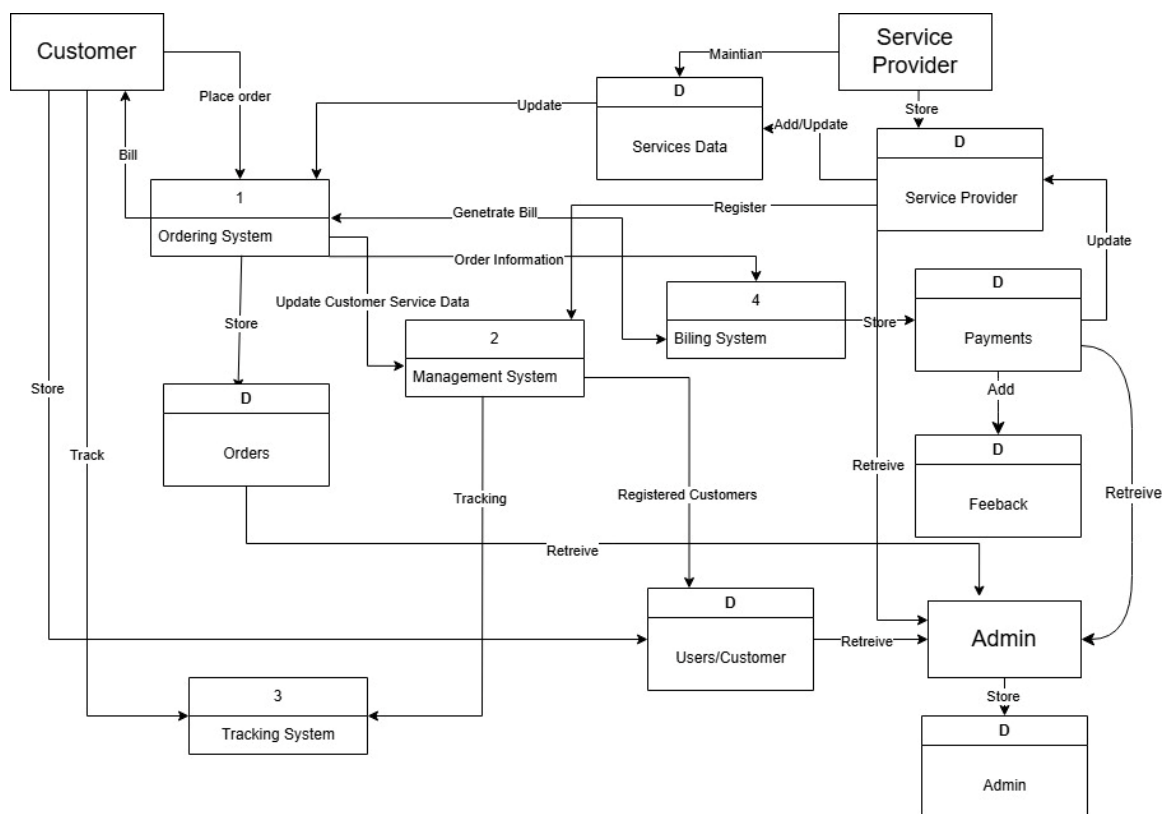

Below summarizes the naming recommendations for identifiers in Pascal casing is used mainly (i.e. capitalize first letter of each word) with camel casing (capitalize each word except for the first one) being used in certain circumstances.

<b>Identifier</b>	<b>Case</b>	<b>Examples</b>	<b>Additional Notes</b>
<b>Class</b>	Pascal	User, Service_provider, Services,Booking s	Class names should be based on "objects" or "real things" and should generally be <b>nouns</b> . No ‘_’ signs allowed. Do not use type prefixes like ‘C’ for class.
<b>Method</b>	Camel	findByName, existsByNameAn dServiceprovider	Method should use verbs or verb phrases.
<b>Parameter</b>	Camel	name, provider,id	Use descriptive parameter names. Parameter names should descriptive enough that the name of the parameter and its type can be used to determine its meaning most scenarios.
<b>Annotati on</b>	Pascal	SpringBootAppli cation	Use @ at start of annotation
<b>DTOs</b>	Camel	BaseDTO, ApiResponseDT O,BookingDTO	Use to transfer data between the processes

<b>Interface</b>	Pascall with “I” prefix	ServiceProviderD ao	Do not use the ‘_’ sign
<b>Exception Class</b>	Pascal with “Exception suffix”	ResourceNotFou ndException

## Conclusion

In wrapping up, the **Household Services Platform** has been crafted to make life easier by connecting people with reliable professionals for tasks like plumbing, electrical repairs, and cleaning. By using **React** for the user-friendly interface, **Spring Boot** for the sturdy backend, and **MySQL** for secure data storage, we've ensured the platform is both efficient and easy to use. This setup simplifies the process of finding and hiring trusted service providers, making home maintenance more straightforward and less stressful for everyone involved.
